Novel polynucleotides encoding integrase, excisionase and an integrase attachment site isolated from a lysogenic phage pMLP1, useful for transforming an actinomycete.

Claim 5; Page 32; 34pp; English.

The present invention relates to novel polymucleotides encoding integrase (int) and excisionase (xis) and an integrase attachment site (attp) which are isolated from pMLPI, a bacteriophage (lysogenic phage) isolated from Micromonospora carbonacea var. africana. Polymucleotides of the invention are useful for transforming an actinomycete with a vector. They are also useful for creating vectors for site-specific integration into host chromosomes. The integrating vectors are used to express actinomycete genes, manipulate secondary metabolic pathways and create new metabolic products such as hybrid antiblotics. The present sequence is pMLP1 integrase DNA from Micromonospora carbonacea

```
ce everninomicin pathway gene (a bottle-neck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is useful for synthesising novel everninomicin-leated compounds, arising from modifications of the DNA sequence designed to change glycosyl and modifications of the DNA sequence designed to change glycosyl and conditional or mutant everninomicin, for expressing functional or mutant everninomicin biosynthetic enzyme for expressing functional or mutant everninomicin biosynthetic enzyme for other secondary metabolic products, improving the yield of everninomicins and to produce novel everninomicins and also as a hybridisation probe to identify homologous sequences. The encoded polypeptides are useful for combinatorial blosynthesis to generate libraries of orthomycins, e.g. everninomicin analogues/homologues and drug discovery. The DNA encoding the integrase allows for increasing a given gene dosage. The integrate to premanently integrate copies of a heterologous gene of choice into chromosomes of different hosts and to integrate genes which increase the yield of known products or to generate novel products or coff control antibiotics or other novel secondary metabolites. The vector can also be used to integrate antibiotic to the strain is to carry out bioconversions with compounds to which the strain is commanly sensitive and is thus useful in fermentation processes involving e.g. Streptomyces antibioticus. (Updated on 11-SEP-2003 to standardise OS

Transformation efficiency using this integration system is higher than that of prior art DNA integration using double homologous recombination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   919
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            676
                                                                                     The invention relates to the integration of a DNA fragment into a specific site of the Mycobacterium genome, using the integrative functions of a bacteriophage. A genetic system for integrating the DNA comprises: (a) DNA containing IF of a bacteriophage linked to the DNA to be expressed under control of a promoter; or (b) an integrative plasmid carrying the phage attachment site (atte) and the DNA to be expressed under control of a promoter, and a helper plasmid encoding an integrase.

The system can be adapted for other bacteria such as E. coli, Salmonella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          257 TCGGCAACCACCTCCTGCCCATACTCGGCCATCTCACCCTTGACGAGCTGGACGGCAGG 316

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to the present of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is bacterial, fungal or viral infection. The present sequence to a plant to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    381 TCGTCGGAAGCCGCTGGCAGCGAAGACGATCAGCAACTGCCACGGCCTGCTGCACGCAT 440

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to new genes isolated from Micromonospora rosaria plasmid pMR2, and proteins encoded by such genes. The isolated genes of of the invention are useful in the construction of vectors, which can be used in the study and expression of genes, in manipulating secondary metabolic pathways in actinomycetes and in creating new metabolic products such as hybrid antibiotics. The isolated genes can also be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TCGCGGTCACGGATCTGCTGTACGGGCACCTGCGTGAGGAGGTCGACGAGGGGATCCTCG 1084
                                                                                                           The invention relates to new genes isolated from Micromonospora rosaria plasmid pMR2, and proteins encoded by such genes. The isolated genes of of the invention are useful in the construction of vectors, which can be used in the study and expression of genes, in manipulating secondary metabolic pathways in actinomycetes and in creating new metabolic products such as hybrid antibiotics. The isolated genes can also be used to create replicating, Escherichia coli-actinomycete shuttle, integrating and intermycelial and intramycelial conjugation vectors for use in actinomycetes. The present sequence is M. rosaria pMR2 plasmid DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         545 AGAICGGTCGGCTTAICACGGCGCTTCCGCCGCACTGGCGACCGCTCGTCATGCTGCTGG 604

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the cloning and sequencing of the gene cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present sequence a Streptomyces noursei nys2 DNA of nystatin PKS gene cluster

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CTGCCACGGCCTGCTGCACACGATCTGCGGCGCGCGATCGCGGCGAAACGGATCAGGCT 476
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the cloning and sequencing of the gene cluster encoding a modular type I polyketide synthase (PKS) enzyme involved in the biosynthesis of the macrolide antibiotic nystatin. The nystatin PKS is useful as antifungal antibiotics. The present sequence a Streptomyces noursei nystatin PKS gene cluster DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Seguence 125401 BP; 15664 A; 49692 C; 42871 G; 17174 T; 0 U; 0 Other;

                                                                                                                                                                                     The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and
non-coding regions of RNAs corresponding to target genes, gene initiation
codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'
end and the juxta-section between coding and non-coding regions and all
segments of RNAs encoding proteins associated with one or more diseases,
conditions or mixtures. The antisense oligonucleotides may be derived
from sequences AAX55272-74. These multiple target oligonucleotides
conditionally AAX5180-271) can be used for the antisense treatment of
diseases and conditions. Typical diseases and conditions are those
associated with impaired respiration and inflammation, including lung
classases, pulmonary vasconstriction, inflammation, respiratory
classases, syndrome, pain, cystic fibrosis, pulmonary hypertension,
colon cancer, breast cancer, lung cancer, pancreatic cancer,
colon cancer, breast cancer, lung cancer, melanoma, hepatic metastases,
colon cancer, breast cancer, lung cancer, melanoma, hepatic metastases,
colon cancer, breast cancer, lung cancer, melanoma, hepatic metastasized
colon cancer settinoma, kidney cancer, melanoma, hepatic metastasized
colon cancer breast and prostate cancer

The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of 717 360 GTGGCCGGA--GTCCACGCGGGGTCGTCGGAAGCCGCTGGCAGCGAAGACGATCAGCAAÇ 417 477 177 AACCCGTGCTCTTCGACGATGCTGCCCCGGCGCGGAGAGAAAGAGATGAAGTTCCTGAGC 537 pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (GOPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, mananceatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as 538 GACCCGGAGATCGGTCGGCTTATCACGGCGCTTCCGCCGCGCACTGGCGACCGCTCGTCATG 597 Sequence 114955 BP; 6071 A; 29417 C; 36712 G; 21328 T; 0 U; 21427 Other; Datocellular carcinoma, kidney cancer, melanoma, hepatic metastases, a lass all types of cancers which may metastasize or have metastasized the lungs, including breast and prostate cancer diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, TGCCACGGCCTGCTGCACACATCTGCGGCGCGCGATCGCGGCGAACGGATCAGGCTC 658 GACCTGCTCGCCGCGCGCGCCCCGGCTGACCGTCGAGGAGCAGCTCCAGGAGCTGGCCAGC 718 ACGGGAGAGCTCGTCTTCCAGTCGCCGAAGACCGCGAAGGGCCGGCGCACGGTCAGTTTC 300 CGAGCTGGACGGGCAGGTCACCCAGCAGTGGGTCAACGACCTGGAGGCCGGCGTCGGCCC 6; Gaps 4.7%; Score 55; DB 2; Length 114955; 30.7%; Pred. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention. 2 2 231 CGCCGTGAACTCGGAGGGCAACCGGATCCGCAACCACCTCCTGCCCATACTCGGCCATCT 290 291 CACCCTTGACGAGCTGGACGGGCAGGTCACCCAGCAGTGGGTCAACGACCTGGAGGCCGG 350 Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant .. .. .. .. h Similarity 10.5%; Pred. The invention relates to maytansinoid produced by bacterial host cell transformed with expression vector comprising open reading frame from ansamitocin gene cluster I of Actinosymmema pretriosum. Maytansinoid is useful as a potent antitumour agent. The present sequence is A. pretiosum ansamitocin gene cluster I O-methyltransferase gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               463
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  175

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Actinosynnema
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Actinosynnema                                                                                                                                                                                                                                                  The invention relates to maytansinoid produced by bacterial host cell transformed with expression vector comprising open reading frame from ansamitooin gene cluster I of Actinosymmema pretiosum. Maytansinoid is useful as a potent antitumour agent. The present sequence is A. pretiosum ansamitocin ansamitocin biosynthetic gene cluster I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 644 GCGCCGGCCGGGTCGACCTGCTCGCCGCGGCCCCGGCTGACCGTCGTCGAGCAGCAGCTCC 703

The genes can be divided into 5 subclusters: (1) genes A, B, C, D and F encode an efflux pump; (2) genes H, I, J and K encode butyrate container synthases; (3) genes L, M and N encode polyketide synthases (PKS) (5; (4) genes O, P, Q and R encode a keto/encyl reductase and cyclases/dehydrases; and (5) genes S and T encode a keto/encyl reductase and a hydrolase. Also claimed are vectors, host cells (especially a Streptomyces rosecfulvus), and the encoded proteins. Cells transformed using the above sequence can be cultured to proteins. Cells transformed using the above sequence can be cultured to converted to frenolicins by chemical or other methods. The frenolicins can be oxidised to frenolicins a enimal feed additives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3636
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1005 CCGCCTCGGTCACTCGTCGCGGTCACGGATCTGCTGTACGGGCACCTGCGTGAGGA 1064

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a frenolicin gene cluster from Streptomyces roseofulvus. The present invention describes: (1) a vector containing the frenolicin gene cluster DNA sequence operably connected to an expression control sequence; (2) a host cell transformed by the above vector; (3) a protein coded by the above DNA sequence; (4) a method for the preparation of frenolicin or a biosynthetic intermediate for it in which the above cell is cultured and frenolicin or its biosynthetic intermediate is isolated from the culture or the cell; (5) a method for the preparation of frenolicin by whing frenolicin, and (6) a method for the preparation of a feed composition by mixing frenolicin with other components. Frenolicin B is useful as an antibiotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCGGCACACACGCGGCGATCCTGATTTCTGCCGGGCGTCCGCTGTCGCGATCTCCCG 1004
